

East of England Permit Scheme

Hertfordshire County Council Permit Scheme Evaluation - Year 4

This document has been produced for Hertfordshire County Council

No part of this document may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic mechanical, photocopying, or otherwise, without either prior written permission of the owner(s).

Hertfordshire County Council has now been operating a permit scheme for 4 years. HCC plays a key role in the National Permit Authority Group which helps shape the operation of Permit Schemes across the country, taking on board the view of stakeholders, ensuring best practice guidance is issued. Additionally, HCC has used its experience of 4 years of operation to influence, and help write, the HAUC National Guidance for the Operation of Permit Schemes.

This report provides data from year 4 of the operation of the Permit Scheme. As stated in previous annual reports, we can demonstrate numbers of permits processed at all stages, and how efficient we have been. There still seems to be a national struggle to demonstrate, and place a figure on, how effective a permit scheme is. HCC are taking the lead in the creation and delivery of measures that will demonstrate the effectiveness and benefits of operating a Permit Scheme including a full CBA review.

HCC are leading the deployment of a roadworks impact calculator, developed by Open Road Associates. This allows the co-ordination team to assess the impact of proposed works – from the information submitted in permit applications – and model the impact of different parameters e.g. duration, traffic management and carriageway type. By capturing the difference (reduced) social/economic impact (£'s), this will be a key indicator of the effectiveness of the scheme. Further details and data will be published in next year's report.

Most evaluation measures listed in this report are displayed in two groups – Highways (LHA) and Statutory Undertakers. Highways (LHA) combines all works undertaken by the Authority works promoters. There are some instances where Authority works promoters and Statutory Undertakers are displayed in further granularity to allow a secondary level of analysis.

I hope that we continue to develop the operation of the Permit Scheme in Hertfordshire, and help work with the National Permit Authority Group, to continue to deliver a positive benefit to the management and coordination of road and street works thus reducing their overall impact.

Jon Prince IEng MICE MSc
Group Manager
Network Management
Hertfordshire County Council

Whilst there is no regulatory obligation to publish a revised Cost Benefit Analysis (CBA), HCC has commissioned a review of the CBA for year 1 to 3 of the scheme operation. We feel that this is warranted as there have been several amendments and developments – both local and national – to how the permit scheme is operated. Extracts of the full CBA review are below.

A cost-benefit analysis was undertaken before scheme implementation to assess whether the permit scheme was likely to deliver societal benefits in excess of the cost of implementing and operating the scheme, and hence whether the scheme should go ahead.

With three years of post scheme data, we take this opportunity to review the value of the scheme with the benefit of a number of years of outturn scheme operating costs and revenues, and updated estimates of the societal impact of roadwork and how these may differ under the permit scheme.

A headline summary of the approach adopted is as follows:

- Identify the scale and characteristics of roadworks which have taken place in the first three years of permit scheme operation, and quantify the scale of societal impact that these roadworks will have had;
- Estimate the reduction in roadworks resulting from the permit scheme and quantify the benefits of this reduction;
- Identify the cost of setting up and operating the permit scheme since its inception;
- Undertake the cost benefit analysis to determine the benefit to cost ratio and net present value delivered by the scheme

Since Year 1 (2012/13) of permit scheme operation the cost of a single day of ‘typical’ roadworks has increased considerably, and as such has increased the total cost impact of roadworks in Hertfordshire. However, this is largely driven by the shift in composition of roadworks from lower impact traffic management, such as carriageway incursion, to high impact traffic management, such as road closures and shuttle working. In particular, roadworks on urban single carriageways involving shuttle working have increased from 8% of total works in Year 1 (2012/13) to 17% in Year 3 (2014/15). This is shown in the table below.

| Locality | Road Type | Works Type | Year 1 | Year 2 | Year 3 |
|----------|---------------|----------------------------|--------|--------|--------|
| Rural | Dual 2-Lane | Lane Closure | 0% | 0% | 0% |
| | | Road Closure | 0% | 0% | 0% |
| | | Some Carriageway Incursion | 2% | 1% | 1% |
| | Single 2-Lane | Lane Closure | 0% | 0% | 0% |
| | | Road Closure | 1% | 2% | 2% |
| | | Some Carriageway Incursion | 25% | 22% | 19% |
| | | Shuttle Working | 4% | 6% | 8% |
| Urban | Dual 2-Lane | Lane Closure | 0% | 1% | 1% |
| | | Road Closure | 0% | 0% | 0% |
| | | Some Carriageway Incursion | 3% | 2% | 1% |
| | Single 2-Lane | Lane Closure | 0% | 1% | 1% |
| | | Road Closure | 2% | 4% | 4% |
| | | Some Carriageway Incursion | 55% | 49% | 45% |
| | | Shuttle Working | 8% | 12% | 17% |

The benefits of the permit scheme are expected to be achieved through more efficient and better managed roadwork events taking place compared to the patterns observed before scheme implementation. The default assumption relating to anticipated impact of a permit scheme is to observe a benchmark 5% reduction in roadwork impact (as stated in the DfT Permit Scheme Evaluation Guidance, 2016).

Appraisal Results

The cost benefit analysis takes the benefits and costs established from the first year of operation projects these over the 25-year appraisal period. The future cost and benefit streams are discounted using the standard discount rate of 3.5%, meaning that near term costs and benefits are valued more highly than those occurring later in the appraisal period.

The results of the cost benefit analysis are as follows:

| | |
|------------------------------------|-------------|
| Net present benefits of scheme (B) | £50,754,162 |
| Net present cost of scheme (C) | £23,284,795 |
| Net Present Value of scheme (B-C) | £26,908,367 |
| Benefit to Cost Ratio (B/C) | 2.13 |

The scheme benefits are seen to outweigh scheme costs, providing a significant net present value of £26.9m. The benefit to cost ratio (BCR), which provides a measure of value-for-money exhibited by a scheme returns a value of 2.13 which represents 'High Value for Money'.

Permit Applications

| | Highways (LHA) | | | | | Statutory Undertaker | | | | |
|--------------------|----------------|--------------|--------------|---------------|---------------|----------------------|--------------|---------------|---------------|---------------|
